# **INTERACTIONS BETWEEN THE YEAST *HANSENIASPORA UVARUM* AND THE SPOTTED WING *DROSOPHILA*, *DROSOPHILA SUZUKII***

par

Paul Becher

Univ. Agric. Sci., Uppsala

 *Drosophila suzukii*, a fly infesting soft-skinned fruit, is associated with the yeast *Hanseniaspora uvarum*.

 In our current work we investigate the ecological interactions between fly and yeast. We study fly behaviour and performance in respect to yeast, as well as yeast growth under influence of the fly. Our data suggest a mutual relation between *D. suzukii* and *H. uvarum*.
